Note:

1. The signal range and data throughput may vary depending on the network conditions and environmental factors.
2. Mind the following limitations and requirements for the mini USB port:
   - The USB hard drive must be of 2.5'' or 3.5'', version 2.0 or above
   - The USB hard drive's storage capacity must not exceed 2TB
   - USB flash drives and USB hubs are not supported
   - External power supply is required for the USB hard drive
   - To connect a GV-WiFi Adapter, make sure it is connected before the camera is powered on.
3. Specifications are subject to change without notice.
4. Mind the following when using a memory card for recording:
   - Recorded data on the memory card can be damaged or lost if the data are accessed while the camera is under physical shock, power interruption, memory card detachment or when the memory card reaches the end of its lifespan. No guarantee is provided for such causes.
   - The stored data can be lost if the memory card is not accessed for a long period of time. Back up your data periodically if you seldom access the memory card.
   - Memory cards are expendable and their durability varies according to the conditions of the installed site and how they are used. Back up your data regularly and replace the memory card annually.
   - To avoid power outage, it is highly suggested to apply a battery backup (UPS).
   - For better performance, it is highly suggested to use Micro SD card of MLC NAND flash, Class 10.
   - Replace the memory card when its read/write speed is lower than 6 MB/s or when the memory card is frequently undetected by the camera.
5. When GV-BX2600 uses Micro SD card or USB HDD for recording, the camera must not have more than one connection to GeoVision or third-party software.
6. Mind the following restrictions, without regard to the resolution of the camera images, when the GV-BX2600 camera is set to 60 fps:
   - The codec MJPEG is not available in the main stream.
   - Dual streaming is not supported.
   - Video analysis functions, including motion detection, are not supported.
   - TV-out is not supported.
   - The frame rate will be dropped to 30 fps during live streaming and recording when the camera starts monitoring.
   - WDR Pro function is not supported.
   - 1 or 2 fps will be dropped on the point of obtaining snapshots in JPEG format with the CGI command.
